rejection. Applicants contend that the Examiner has not established a prima facie case of obviousness. It is well established that in order to establish a prima facie case of obviousness, one of the criteria that must be shown is a suggestion or motivation, either in the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or combine the reference teachings. The Examiner has not shown any suggestion or motivation to combine the references. The Examiner merely supports his conclusion of obviousness by saying that the "prior art in combination provided the motivation and a reasonable expectation of success." The Examiner has not provided any rationale or evidence for his conclusion. Accordingly, applicants contend that the Examiner has not established a prima facie case of obviousness. Applicants contend that these remarks obviate the above rejection and respectfully request that the Examiner reconsider and withdraw this ground of rejection.
